Important Information

Before investing in CVR Dynamic Allocation Fund you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other important information is contained in the Fund's prospectus, a copy of which may be obtained by calling (855) 328-7691 or by visiting the Fund's website at www.cvr-funds.com. Please read the prospectus carefully before investing.

Risk Disclosure

All investing involves risk including the possible loss of principal. There can be no assurance the Fund will achieve its investment objectives. In addition to the general risks of investing, the Fund is subject to additional risks including commodities risk, derivatives risks, ETF risk, risks of foreign investing and model and data risks. Exposure to the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Derivatives, such as options, futures and swaps, can be volatile, and a small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. Shares of an ETF may trade at a premium or discount to the net asset value of its portfolio securities. Foreign investments may be subject to additional risks, which include international trade, currency, political, regulatory and diplomatic risks, which may affect their value. Given the complexity of the investments and strategies of the Fund, the Adviser relies heavily on quantitative models and data supplied by third parties. Models and Data may prove to be incorrect or incomplete and expose the Fund to potential risks. Please see the prospectus for a complete discussion of the Fund's risks.

Standard Deviation is a measure of the dispersion of a set of data from its mean. **Beta** is the measure of a fund's relative volatility as compared to the S&P 500 Index. Beta attempts to measure the relative risk. A Beta rating above 1.0 indicates greater volatility than the market. A Beta rating below 1.0 indicates lower volatility than the market. **Sharpe Ratio** is a risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance. **R-Squared** is the measure of percentage movement of a fund compared to the S&P 500 Index. A high R-Squared (between 85 and 100) indicates the Fund's performance patterns have been in line with the Index. The **S&P 500 Total Return Index** is a market capitalization-weighted index of 500 large-capitalization stocks commonly used to represent the U.S. equity market. All returns reflect reinvested dividends and capital gains distributions. One cannot invest directly in an index. The **HFRX Equity Hedge Index** tracks Equity Hedge strategies of third party hedge fund managers that maintain positions both long and short in primarily equity and equity derivative securities. The presentation of the HFRX Equity Hedge Index is intended to offer a comparison of the Fund's performance to an index of strategies that invest primarily in equity securities and have a significant hedging component. **CAIA** - means Chartered Alternative Investment Analyst.

The Defensive Equity strategy incorporates a rule-based algorithm that signals risk-on / risk-off, offering capital protection and the potential for asymmetric returns. Shock Absorber I & II refer to the potential for a reduction to beta and volatility provided by the Defensive Equity and Absolute Return strategies.
